

Amendments to the Specification:

Please replace the paragraph beginning on page 7, line 21 with the following rewritten paragraph:

pl
-- When jigging is performed from a boat with a dual-bearing reel RL thus configured, the dual-bearing reel RL is installed onto the reel seat RS as shown in Figure 2 1. Then, the fishing line is drawn out from the tip through a fishing-line guide on the fishing rod RD, which is not illustrated in the Figures. Terminal tackle such as a jig is attached to the end of the drawn-out fishing line. In this state, the harness HN is fitted to the waist, and the harness braces HB on the harness HN are locked into the harness clips 4, as shown in Figure 3. Further, gimbals, which are not illustrated in the Figures, are fitted to the waist, so as to receive the butt of the fishing rod. The dual-bearing reel RL and the fishing rod RD are thereby firmly supported by the angler FM. --
